Total Drilled Length:									4,812.80	Total Samples:			1739		

- NOTE:**
1. RQD is defined as the cumulative length of core pieces longer than 10 cm in a run divided by the total length of the core run. It is measured as the core is taken out of the splits. All data is used later in engineering studies.
 2. Total samples means the total number of drill core samples and standards from that drill hole, and do not necessarily correlate to the length of intercept.
 3. * indicates drilling under way at this hole
